

# New ShipWeight Patch 13.6

Updates since last patch is as follow:

- More user-friendly GUI in cells in Main window and Item window – Possible to use arrows when editing content in a cell.
- Code Definition window - Subcodes can now have Factor and Unit Weight with decimals.
- SQL Query window - More user-friendly and extra options for adding current project to the WHERE part of the SQL string.
- New functionality in Main window right click menu – Collapse All.
- New functionality in Logon window and Log window - Username not case sensitive.
- New syntax in Parameter Definition window - Possible to convert to pound and kilogram when referring to wgt. grp. value. In US units Pound: LW|W@2240@\* and in SI units to get kg: LW|W@100@\*.
- Select Project Type window - Not relevant options removed.

Bugfixes for:

- US units when switching source in Main window.
- Estimated values in Source Table in Main window.
- Estimate with lock functionality and update on remainder in Main window.
- Custom Import window – Show correct number of items imported.
- Show Fields in Main window.
- US units in Gyradius window.
- Deleting large amount of data in Database Table window.
- The number of characters in Server Name increased.
- Method Definition window - Save method that has been copied.
- Project Statistics window – Show correct number of wgt. grp. in wgt. grp. field.
- Code Definition window – Error message when creating subcode.
