

The Most Powerful Tool for Weight Engineering

ShipWeight

ShipWeight is a mass properties and weight engineering management tool that can be used through all phases of a project.

ShipWeight is used by nearly 100 companies worldwide.

Some of the key features of ShipWeight are:

- Parametric estimation based upon historical projects.
- Flexible and user defined setup of tracking quantities, relations, and GUI.
- Quality assurance tools and integration.
- Flexible, tailor-made and complete reports.
- Security and multiuser functionality through MS SQL Server.

ShipWeight will help you to control weight data in the company's hands, giving easy access to weight data for current and historical projects, reducing risk and foresee weight issues before they become problems.
